

Vodavi XTSc Telephone System

Full-featured Communications in a Compact Package

Maximum Capacities

The XTSc is a single-cabinet unit that starts as a 4 x 8 x 2 (4 CO lines, 8 stations, 2 analog ports) and can grow to 28 x 44 x 2. It has 5 universal expansion slots that can be used for station, CO, ISDN, In-skin voicemail or VoIP expansion.

Connectivity

The XTSc supports LCOB, PRI, T1 or VoIP connectivity.*

Flexibility. Mobility. Affordability. These are attributes business owners demand in today's highly dynamic communications enterprise. In the effort to improve overall business productivity and profitability, enterprise customers expect flexible solutions that offer a wide range of options in order to meet the simplest to more complex applications. From branch office solutions with remote workers utilizing IP communications to the customary office application requiring traditional telephony, today's businesses seek the seamless, affordable convergence of both these worlds.

Using the Vodavi XTSc telephone system, you can now deploy a single converged platform that supports both IP and traditional applications. So depending on the technology that suits your needs today, you can be confident that your initial investment in Vodavi's XTSc will be protected as you add new applications in the future.

All the Features You Expect from a Phone System, and Then Some

The Vodavi XTSc range of service starts at 8 stations and grows to a maximum of 44 stations. It shares the same internal components as Vodavi's larger, scalable XTS communications system so when growth extends beyond 44 stations, your phone system can grow with you. Should you need to migrate to the larger 600 port XTS platform, simply replace the cabinetry and master processor component of your XTSc system.

The XTSc also comes with the same robust feature set as our larger XTS system. For a smaller initial investment you get all the communications capability you'll need. From placing conference calls to Least-Cost Routing, Direct Inward Dial to Caller ID, your Vodavi Authorized

Dealer can build an XTSc system to support all your needs. Optional applications such as Voice Mail, CTI, ACD and VoIP are all easy add-ons.

Perfect for Multi-branch Locations

The XTSc can enable your dispersed workgroup to act as one team, whether across the street or across the country. When networked, the XTSc can be used as a hub or node system in conjunction with other XTSc systems or even our larger XTS system. Networking allows users to perform the same functions with remote users as they do within their own building... features such as 4-digit dialing between users, easy transfers, intercom, paging and more. In networked applications, PathFinder offers centralized voicemail.

Voicemail Flexibility

The XTSc has an optional In-skin 8-port Flash voicemail system that supports 64 mailboxes and comes standard with 3-hours of memory that can be expanded to 9 hours.** If a more robust voicemail system is desired, our flagship PathFinder Windows®-based system is recommended.

Interested in VoIP? The XTSc Delivers

Utilizing the same Discovery VoIP interface as the Vodavi XTS system, fully-functional IP extensions can be added to the XTSc system. This is a great way to fold remote workers into your workgroup. Additionally, if you're planning on adding to your physical work space, you can avoid having to run both telecom and data infrastructure to your new space. You can utilize the data network for shared voice/data use with the XTSc and Discovery VoIP.

* System accommodates one VoIP card expandable from 2 to 8 ports.

** In-Skin Voicemail availability TBA.

Vodavi XTSc Telephone System

Full-featured Communications in a Compact Package

User Productivity

- ACD*
